

Assignment Lecture 2

Quantum Fourier Transform

Marten Teitsma

February 20, 2026

Abstract

In this assignment you will implement a generic Quantum Fourier Transform

1 Introduction

Guidelines for this assignment:

- This exercise is done by a team of two or three students.
- The deadline is mentioned during the lecture.
- You will create a Jupiter notebook for each exercise.
- In the notebook you will give ample comments on what you are doing and why.
- All notebooks are compressed in a zip-file (look at the notes of the introductory lecture for further requirements)
- You will use Qiskit as a simulation tool.

2 Quantum Fourier Transform

2.1 Exercise 1

Together with this assignment a Jupiter notebook is published. In this notebook you find code to create a 3-qubit Quantum Fourier Transform. Use this code to make a generic Quantum Fourier Transform for n -qubits.

2.2 Exercise 2

Create a function for the inverse of QFT for n -qubits.

2.3 Exercise 3

Create a notebook which implements the Creating Entanglement pattern found at Quantum patterns.
